

# Electronic Water Pump - Secondary

## Description

Magna's on-demand electronic auxiliary coolant pump family that provides supplemental variable coolant flow.

## Features/Specifications

- Compact form with high power density, low weight & optimized thermal management.
- BLDC motor technology, power levels up to 150 W + & integrated controller.
- In start-stop and hybrid vehicles, can maintain coolant flow when engine is shut-off and mechanical pump is not available.
- In electric vehicles can provide cooling for batteries, inverter, electric motor and other electronic components.
- Can be used for independent circuits such as liquid-charge air cooling systems and cylinder head cooling.
